

SQUIRREL-PROOF BIRD FEEDING APPARATUS AND METHOD

Abstract

A bird feeder includes a vessel for holding seeds. One embodiment comprises a removable access tunnel external to the vessel is coupled thereto at a seed opening in the vessel. The access tunnel, as well as a bar across a bottom portion of the access tunnel opening restricts access to seeds by other than birds. A removable seed cover for the opening held on by the access tunnel is made of a flexible material and includes a seed opening sized and shaped to restrict a number of seeds extractable on a given attempt.
